
saveetha-team-oyxtgst2.atlassian.net/jira/software/projects/SE/boards/3?filter=&groupBy=none
software engineering
To Do
SE-1
Design system architecture and data flow
SE-2
Define telemetry data schema (meter, battery, solar, grid voltage)
SE-3
Build high-velocity ingestion pipeline (Kafka/MQTT)
SE-4
Deploy raw real-time stream processing engine
In Progress
SE-5
Develop grid frequency monitoring and response module
SE-6
Build battery state-of-charge and solar forecasting service
Done
SE-7
Build power routing and dispatch optimization engine
SE-8
Create operator dashboard for live visualization
SE-9
Implement device authentication and security
SE-10
Run load testing and scalability benchmark
